

collaborative presentation and production

Prompting Layer includes control icons and annotations that do not appear on the final, flattened output.

- **Stand** in the path of a front projector *without* any blinding light nor image being projected on the presenter
- **View** Annotations and Controls *only on the projected image* to guide through a smooth flowing presentation
- **Interact** with graphics and remote presenters for a more effective presentation
- **Draw** over graphics or write notes with the pen tool to enhance presentation
- **Collaborate** and communicate with presenters from up to 4 locations simultaneously
- **Combine** *first-generation* graphics with *first-generation* video from each location
- **Record**, display or stream the flattened output with *no* additional camera crew or special lighting required
